DETAILED ACTION

Continued Prosecution Application

➤ The request filed on May 7, 2002 for a Continued Prosecution Application (CPA) under 37 CFR 1.53(d) based on parent Application No. 09/346,283 is acceptable and a CPA has been established. An action on the CPA follows.

Claim Rejections - 35 USC § 102

➤ The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

➤ Claims 1 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Nair et al. (US Patent No. 5,362,952).

Regarding claim 1, Nair et al. teach a device (see cols. 1-22) comprising a semiconductor support substrate (48) supporting a sensor element (70), a logic circuit (152) and a semiconductor visual display element (68) (see Figs. 4A-4B).

Regarding claim 7, Nair et al. teach that the sensor (70) comprises a pressure/contact sensor (see Fig. 4A).

Claim Rejections - 35 USC § 103

➤ The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

➤ Claims 2-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nair et al. (US Patent No. 5,362,952) in view of Ogihara et al. (US Patent No. 6,222,208 B1).

Regarding claims 2-6, Nair et al. fail to teach that said visual display comprises an array of GaAs light-emitting pn junctions and an array of semiconductor pixels having pitch dimensions of about 20 μm . Ogihara et al. teach that it is well known in the art to use GaAs LEDs as display devices, which comprise a pitch of about 20 μm (see col. 1, lines 10-13 and 20-30, and col. 5, lines 12-15). Therefore, it would have been obvious to one having ordinary skill in the art at the same time the invention was made to modify Nair et al. to use GaAs LEDs as display devices having a pitch of about 20 μm . The ordinary artisan would have been motivated to modify Marsh in the manner described above for at least the purpose of providing a high precision and bright display.

Response to Arguments

➤ Applicant's arguments with respect to claims 1-7 have been considered but are moot in view of the new ground(s) of rejection.
